1. **Objectives of the Pilot Test**

The primary objective and purpose of the 2012 Ohio Medicaid Assessment Survey (OMAS) Pilot was to replicate the conditions for full-scale survey data collection. The sample for the pilot was drawn in the same manner that will be used to draw the final sample (discussed in more detail later in the report). However, there were several methodological differences between the implementation of the pilot and the ultimate fielding of the OMAS. For example, call attempt protocols were relaxed during the pilot in terms of the number and timing of telephone attempts. Also, refusal conversion attempts were not conducted during the pilot. Finally, the final training protocol will be modified based on observations from the pilot activities.

The secondary objective of the pilot was to determine more accurately the survey length for both the adult and the adult-child versions of the instrument.

Tertiary objectives for the pilot included further checks on the Computer Assisted Telephone Interviewing (CATI) programming, assessment of questionnaire flow, evaluation of respondent understanding, identification of potential fielding issues, and a greater and more refined understanding of interviewer training needs.

2. **Location and Dates of the Pilot**

Interviewing for the pilot started on Friday, April 13, 2012 and continued through Wednesday, April 18. All of the telephone interviewing occurred at the RTI International Call Center in Raleigh, NC.

Piloting was completed using an English-only version of the instrument for landline sample which was reviewed by both RTI International and Ohio State University (OSU) project management teams. Actual fielding will use a CATI program allowing Spanish language displays, and a slightly modified instrument for cell phone records. Programs for each version of the instrument will be made available to the client prior to activation in the call center.

The OMAS interviewers made calls between the hours of 2pm – 9pm on Friday, 9:30am – 6pm on Saturday, 1pm – 9pm on Sunday and 9am – 9pm Monday and Tuesday, and 9am – 8pm, Wednesday. At the conclusion of interviewing, RTI International obtained 103 completed interviews. Completed interviews were obtained with between one and six attempts per record, the average number of attempts for a completed survey being 1.6. During actual fielding the sample will receive more attempts and refusal conversion efforts than were operationally feasible during the pilot.

The remainder of this report is organized into the following sections:

**Training for the Pilot**: This section details the location, date, and time of the training, the number of people trained, and some suggestions for revisions to the training agenda based on an assessment by the interviewers and project management team.
Sample: This portion of the report outlines the manner in which the sample for the OMAS was framed and drawn for the pilot and how it was managed in order to fulfill the quota requirements.

Questionnaire: This is the heart of the report, outlining issues with the CATI questionnaire, wording/flow, respondent understanding, interviewer administration, open-ended responses, item non-responses, interview time, break-offs, refusals, timings, analysis of questions examining wording changes and recommendations.

Monitoring Feedback: This portion includes the feedback RTI received from OSU as the result of live monitoring during the Pilot.

3. Training for the Pilot

RTI conducted 2012 OMAS pilot training on April 9th-10th at RTI’s Call Center located in Raleigh, NC. The 2012 OMAS Data Collection Task Leader, Kathleen Considine, led the training sessions with assistance from RTI and call-center staff. The academic Principal Investigator from The Ohio State University, Amy Ferketich, attended the first night of training. Sixteen experienced interviewers and seven supervisors participated in and successfully completed the pilot training.

Interviewers had to complete training and certification prior to beginning “live” calling in production. Training consisted of eight hours split between the two evenings. Topics covered during training focused heavily on the survey’s background and structure, study specific protocols and procedures, pronunciation, and answering frequently asked questions. Dr. Ferketich provided interviewers with additional study details and answered questions as needed.

During training, interviewers participated in two round-robin mock interviews, two paired-practice mocks, and completed individual survey practice. Pilot certification involved two oral quizzes, successfully attending and participating during training sessions and exercises, and completing a practice interview during their first scheduled shift. Interviewers needed to achieve 100% correct on both oral quizzes to become certified and begin calling.

The 2012 OMAS pilot training agenda included:
Evening 1 Agenda

- 5 minutes  Welcome and Introduction
- 25 minutes  Survey Background, Purpose and Structure
- 10 minutes  Respondent Rights and Importance of Confidentiality
- 20 minutes  Frequently Asked Questions
- 10 minutes  **BREAK**
- 10 minutes  Pronunciation Exercise
- 60 minutes  Round-robin mock #1 (Adult Only)
- 20 minutes  Distressed Respondent Protocol/Sensitivity Training
- 15 minutes  Importance of Refusal Avoidance
- 60 minutes  Paired Practice #1
- 5 minutes  Wrap-up/Homework Guidance

Evening 2 Agenda

- 20 minutes  Collaborative FAQ review and protocols review
- 45 minutes  Paired Practice #2
- 20 minutes  Individual FAQ review
- 10 minutes  Elements specific to using the dialer
- 75 minutes  Round-robin #2 (Adult and Child Questionnaire)
- 15 minutes  **BREAK**
- 20 minutes  Certification Quizzes
  - Oral FAQ Quiz
  - Oral Pronunciation Quiz
- 30 minutes  Individual Survey Practice

Since only experienced interviewers could work on the pilot, the iLearning and on-site introductory CATI training was not included for the pilot. These modules are mandatory for new hires and will be completed when training for the full scale data collection.

Interviewers identified potentially challenging sections in the survey during training. Specific concerns addressed the flow of the introduction and trouble navigating the work/industry questions. As a result of interviewer feedback, RTI is developing a job aid to assist with the industry questions.

Future 2012 OMAS trainings will follow a similar schedule as used for pilot trainings. However, prior to 2012 OMAS project specific training; interviewers will complete the iLearning and CATI training sessions. We anticipate using the same day one pilot schedule for the full-scale training. However, training day two will be revised slightly to address issues specific for newly hired interviewers. The schedule for training day 2 is as follows:
**Full-Scale Training Day 2 Agenda**

Interviewer quiz results have been provided separately to OSU.

**4. Sampling Frame and Selection**

The sampling frame used for the OMAS pilot was the set of all 100-banks in Ohio associated with landline phone numbers. An RDD sample of 13,000 landline phone numbers was selected from throughout the state. Marketing Systems Group’s (MSG) Genesys system was used to select the 100-banks used in the pilot. MSG screened out all listed business numbers. The screening process removed 870 phone numbers leaving a final sample of 12,130 numbers. In addition to conducting a pilot to test the OMAS questionnaire, RTI used the pilot to test screening non-working and business numbers in the sample. In the past, RTI paid MSG to identify and purge these numbers from the sample file prior to the start of data collection. But, with the use of a predictive dialer, RTI used the pilot to determine if the screening process could be done in a more cost effective manner using the predictive dialer to determine non-working numbers. To determine this RTI released more sample than would otherwise be needed for the pilot. Our test found that RTI can identify non-working numbers using our predictive dialer in a more cost efficient manner than paying MSG to conduct the screening. RTI will use this approach in the main OMAS study.

**Replicates**

The sample of phone numbers was randomly assigned to replicates of 50 phone numbers. All replicates were released.

**Disposition of Pilot Sample**

There were 103 completed interviews in the pilot. Table 1 presents the final disposition for all 12,130 sampled numbers.

*Note: Code 53 was an erroneous code and will not be implemented for the main sample.

5. Questionnaire

Before pilot testing, the OMAS instrument went under various levels of review and testing. Upon receipt of the instrument, RTI survey methodologists provided an expert review of the questionnaire considering the content as well as how the questions might come across as read by an interviewer. The instrument was then reviewed by invested parties from the State of Ohio and a consensus on changes was reached. Changes included deleting questions, adding new questions, moving question locations, revising skip instructions and revising current questions. Changes from the review were then integrated into the instrument that had already started being programmed. Changes were implemented to the best of RTI’s ability in the time available, but some revisions were not able to be programmed before the pilot study. Once programmed, RTI staff used the remaining time to test the CATI instrument and look for any errors. This testing process continued up until the launch of the pilot study. The next few sections describe what we discovered as a result of the pilot study.
Data / Skip Pattern Review

We reviewed a frequency listing of all variables from the questionnaire to evaluate whether all skip patterns were being administered correctly. (Note: the frequency distribution has been provided separately to OSU). We identified several areas in the specs that needed to be clarified (in terms of updating variable names used in documenting who should get asked which questions). In addition, we found some errors in the skip logic that we are fixing. Errors identified included:

**Adult Instrument**

- (Adult) E59_1. This question should be asked when E59=00. No cases met that criteria, but one case was asked this question.
- (Adult) F67a1. This question should be asked if F67_2=1, 2, or 4. Only 87 cases met that criteria but the question was asked of all respondents.
- (Adult) B4chk. Thirteen cases got this question where B4b_CON1 was not missing, and they should not have. Twenty-nine cases also got this question when they did not have B4a-B4g series >1 and they should not have.
- (Adult) Fh01, Fh03 and Fh05. Three cases where F67a = 1 or 2 did not get these, though they should have as they were non-proxy interviews.
- (Adult) G72. Two cases got this but should not have because G71a=3.
- (Adult) G72b. Two cases got this but should not have because G72a= 1.
- (Adult) G72c. Five cases got this but should not have because B4ab=1.
- (Adult) IN03. Did not store a value when IN02=2-7 or 997. All cases that received IN02 should have a value stored in IN03.
- (Adult) S17. This item should record race, but 17 people had no race recorded at all. There was also one person who answered ‘other’ to S17 but S17a was blank.
- (Adult) H86. One person did not receive H86 when H85 = REF and should have.
- (Adult) PINQ235. There were 6 cases that were not asked this item when H86 = 1; they should have been asked this item according to the skip instructions because only H86= 2 should be skipped.
- (Adult) H89_CON. There was one instance where H85>H98 and the question was asked.
- (Adult) E63days. This variable did not calculate when answered in years because it was not in the specs, though it should have been. This has been added to the programming specs.
- (Adult) C26days. C26 was recorded as 0 (never) one time, but C26days showed missing instead of 0.
- (Adult) B7. Of the 41 people who got asked this question, 3 met the criteria as shown in the specs. One respondent met the criteria but did not receive this question.
- (Adult) H88. One household had 3 adults and no children, but was calculated as 4 in H88.
- (Adult) Meal_1. One proxy received this item though it should not have been asked of proxies.
- (Adult) SPRX1 & SPRX2. There was one proxy who did not receive either SPRX1 or SPRX2.
Child Instrument

- (Child) i90a. This question should be asked if i90=1, 98, or 99. Only 17 cases met that criteria, but 18 cases were administered this question.
- (Child) J124a. This question should be asked if J120=1. No cases met that criteria, but 2 cases were administered this question.
- (Child) J100chk: There was one case where this item was asked when there was only one ‘1’ in the J100a-g series.
- (Child) J105a: There were 4 cases where this item was not asked and should have been based on the child having different insurance than the person in the adult instrument, or having a different adult proxy for the child and the child had insurance.
- (Child) J113: One case did not receive this question when it should have been asked because i95 = 1.
- (Child) K98a: One case did not receive this question when it should have been asked because C4 = 1.
- (Child) K99: There were 10 cases where this item should have been asked because either C1 = 2 or i91a = 1.
- (Child) J100a-g: These are only being asked when PI90 = 1 and i95a = blank and J96a = blank. The question is whether J96a = blank counts as a criteria for these items to be asked.

Timing

The mean interview time for all cases was 23.43 minutes, with a median time of 22.08 minutes. The minimum interview length was 13.95 minutes and the maximum interview time was 48.23 minutes. Approximately 75% of all interviews were completed in less than 26 minutes.

The mean interview time for cases administered for the adult questionnaire was 21.90 minutes, with a median time of 21.07 minutes. The minimum interview length for cases administered the adult questionnaire was 13.95 minutes and the maximum interview time was 48.23 minutes. Approximately 75% of all adult questionnaire interviews were completed in less than 24 minutes.

There were 17 cases with a child interview. The mean interview time for cases administered both the adult and child questionnaires was 31.13 minutes, with a median time of 27.87 minutes. The minimum interview length for case administered both the adult and child questionnaires was 22.02 minutes and the maximum interview time was 42.46 minutes. Approximately 75% of all child questionnaire interviews were completed in less than 37.5 minutes.

In review of the timing data we found that some of the section timers were not working as specified, so we are only able to report overall timing data. Section timers are problematic given the fact that some respondents will change answers and back up in the survey, some will hang on one item, and interviews that break off then start again later introduce more problems. RTI is confident the means reported above for overall interview length, overall adult interview length, and overall adult plus child interview length are stable estimates given the sample size.
Break-offs

There were a total of 25 break-offs in the pilot study that were left incomplete. Four (16%) of those break-offs happened when the interviewer got to the child section of the interview and the person who would best be able to answer insurance questions about the child was unavailable. The remaining 21 interview break-offs are described in Table 2. Most of the time, the break-off happened because the respondent decided to refuse to go any further in the interview or simply hung up. Other break-offs could be considered “soft refusals” when they made an excuse to get off the phone and simply did not answer the phone when an interviewer called back. The interviewers recorded explanations to the extent that they could when there was a break-off in the interview. These explanations are presented in Table 2.

**Item Nonresponse**

Item nonresponse in completed interviews was minimal throughout the instrument. As is common in surveys, the greatest nonresponse occurred on income questions. These questions are denoted in Table 3 with one asterisk (*). Almost a quarter of respondents did not answer the open-ended annual income question (H85). More than half (56%) of those who did not answer H85 did provide a response to H86, which provided income ranges for the respondent to choose. Only 4 items from the child instrument (denoted with two asterisks in Table 3) did not receive 100% item response. This is not surprising given that the questionnaire is designed to speak to the person most knowledgeable about the insurance of the child in question. There were no item refusals in the child instrument.

### 6. Refusals

While conducting the OMAS Pilot, RTI International obtained 10 records with final dispositions indicating some type of refusal, and 770 records with initial refusal to complete the survey. There were 351 households hung up during the introduction 15 before affiliation and 336 after affiliation. A breakdown of frequency of resistance along with planned dialing protocol is provided in Table 4. Since the telephone interviews can code more than one reason per case the numbers below will not add up the totals for the status codes.

#### Table 4. Refusal Types

<table>
<thead>
<tr>
<th>Disposition</th>
<th>Occurrences</th>
<th>Description and Protocol</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status Code 30 Initial Refusal</td>
<td>770</td>
<td>These respondents provided “soft” refusals, i.e. resistance to conducting the survey without providing firm instruction not to reattempt the record. The contact was read the introduction to the survey and therefore made a somewhat informed decision not to participate at the time of contact. We address these refusals by calling back at a different time period, when it might be more convenient for the contact to conduct the survey or we might reach a person more amenable to completing the screening process.</td>
</tr>

7. General Interviewer Comments and Recommendations:

Interviewers reported an overall positive experience with the pilot survey. There were no major issues reported and many stated the desire to work on the full scale effort in the future. Interviewers also reported on the most challenging aspects of the project. Their feedback as well as recommendations/actions is summarized below.

Issue: Some interviewers felt that the intro led people to think that they were trying to sell health insurance and that mentioning insurance at the outset led to refusals. Some noted that the intro is abrupt, and does not allow the interviewer to quickly establish the necessary rapport with respondents. Several
reported that mentioning the Ohio State University might also assist with more quickly establishing credibility.

**Recommendation:** Eliminate reference to insurance from the intro. Work with interviewers to appropriately personalize the intro such that all necessary items are covered while allowing them to establish credibility and gain cooperation.

**Issue:** Interviewers noted that transitioning from one section to another could be abrupt and posed some difficulties for respondents (as well as interviewers while they were gaining experience).

**Recommendation:** Explore adding brief, consistent transition statements between sections, such as “now we are going to talk about….”

**Issue:** Several interviewers noted that a number of questions had a large number of interviewer notes/instructions which occasionally made navigation difficult, particularly at outset.

**Action:** Consider reviewing items with multiple interviewer notes and deleting any notes that can easily be covered during training and/or move the non critical notes to the help screen.

**Issue:** Some interviewers felt that some of the respondents were resistant to providing name/DOB/income information.

**Action:** Training will provide further emphasis on how to handle situations where respondents feel uncomfortable about providing personal information. We can add an FAQ about this, in particular for income as it was the topic with the most item nonresponse.

**Issue:** Interviewers reported that the meal questions in the Food section caused general confusion and some frustration among respondents.

**Recommendation:** Review question (especially for single household member) and look into replacing counts with ranges or other scale.

**Issue:** Cell1 was also reported as problematic for both interviewers and respondents.

**Recommendation:** Review question for possible simplification and explore “other specify” as a replacement for option 3.

**Issue:** A number of respondents gave inconsistent and occasionally contradictory responses to their children’s health insurance status. It was difficult for interviewers to disentangle correct answer options.

**Recommendation:** Insert hard checks in this so that inconsistent answers can be easily verified and/or corrected.
Issue: Interviewers noted some respondent frustration with “State of Ohio”.

Recommendation: Train interviewers to make quick reference to the Ohio State University in similar situations to both depoliticize perceived intent as well as establish scientific nature of survey.

8. Client Monitoring Feedback for Pilot

During the 2012 OMAS pilot collection, RTI coordinated four client monitoring sessions. Table 5 is a list of the monitoring dates, the client representative, the RTI supervisor, and the number of monitored interviews for each session.

Table 5. Interviewer Monitoring

</table>

The client sent RTI a compiled list of monitoring notes once the pilot was completed. Below is a brief summary of the client feedback by session. Appendix B lists the complete set of client feedback notes. Please note, interviewer names have been deleted and replaced with identifiers such as “Interviewer A”.

Session 1

- Interviewer A administered the interview too quickly.
- Respondent provided response before Interviewer A read question completely.
- Interviewer B received favorable feedback from respondent at the end of the survey. The client noted Interviewer B did a very good job overall.
- There were instances throughout the session where interviewers stumbled on question wording but immediately corrected themselves.
- Minor CATI issues occurred resulting in respondent hold times ranging from 20 seconds to 1 minute.
- Client would like interviewers to place more emphasis on the blue text.
- Respondent seemed confused with the job type and also breastfeeding questions.
- Minor answer options and skip logic issues noted.
- Interviewer C needs to confirm pounds when entering respondent weight.

Session 2

- Client noted Interviewer A did pretty well although there were times where she administered the survey quickly.
- Respondent was confused at B18 and interviewer D should have provided additional prompting.
Overall, Interviewer A handled respondent confusion well by repeating the question.

Interviewer A displayed a pleasant and professional demeanor, and did a good job emphasizing appropriate words.

Primary client concerns addressed survey content and CATI. Minor typos and skip logic were noted.

Respondents seemed confused with the meal questions.

PRES 8 introduction seems very long.

Session 3

Interviewer A was consistent and had a good tone. She maintained control of overly chatty respondent.

Respondent was confused when asked the number of emergency room visits and Interviewer A handled the confusion well.

Respondents in general experienced confusion with medical home questions, meal questions, and eating habit questions.

Interviewer A adjusted pace of interviewer to accommodate respondent comprehension.

Client noted the flow during transition statements needs improving.

Interviewer B had excellent diction and had a positive attitude toward the respondent.

Minor CATI issues noted.

Respondent confusions between Medicare and Medicaid during child questionnaire. Interviewer B handled confusion well.

Notable unfamiliarity with the instruments, particularly the child questionnaire.

Session 4

Interviewer A demonstrated good pace.

There were times when Interviewer A stumbled on question wording but successfully re-read.

Respondents seemed confused with food questions and whether insurance was purchased directly.

Interviewer B demonstrated great pronunciation. Client noted Interviewer B could have administered survey quicker at times.
Contents

Introduction and Screener Questions for Main Sample ................................................................. A-4
SECTION W: WEIGHTING QUESTIONS .......................................................................................... A-19
SECTION A: CURRENT INSURANCE STATUS .............................................................................. A-21
SECTION B: CURRENTLY INSURED ADULT ............................................................................... A-22
SECTION C: CURRENTLY UNINSURED ADULT .......................................................................... A-37
SECTION D: ADULT HEALTH STATUS & CARE GIVING ............................................................. A-42
SECTION E: UTILIZATION AND QUALITY OF ADULT HEALTH CARE SERVICES ........ A-53
SECTION F: ACCESS TO CARE AND UNMET NEEDS OF ADULT ............................................. A-60
SECTION G: EMPLOYMENT ........................................................................................................ A-71
SECTION H: ADULT DEMOGRAPHICS AND FAMILY INCOME ........................................... A-80
SECTION Q: HOUSEHOLD QUESTIONS ..................................................................................... A-96
SECTION T: INTERVIEWER ASSESSMENT OF INTERVIEW QUALITY ................................. A-99
**Key questions:**

S10  How many members of your household, INCLUDING yourself, are 19 years of age or older?

S1i  Adult’s name or initials

S12  How many children, persons 18 years of age or younger, live in this household, whether they are family members or not?

S12b Including all adults and children, of the [if S12 ≠ 99: NUMBER FROM JOINING ADULTS & CHILDREN] persons in your household, how many are related to //you or S1// by birth, marriage, adoption or legal guardianship?

S11  INCLUDING {YOURSELF/RESTORE PERSON’S NAME FROM S1i}, how many adult members of {your/his or her} FAMILY, age 18 and over, live in this household? By family, I mean two or more persons residing together who are related by birth, marriage, adoption, or legal guardian.

S13  How many children, persons 18 years of age or younger, in {YOUR/RESTORE PERSON’S NAME FROM S1i} FAMILY live in this household?

A1  //Are you/Is PERSON FROM S1// covered by health insurance or some other type of health care plan?

A1A  Health insurance or some other type of health care plan may include health insurance obtained through employment or purchased directly as well as government and military programs such as Medicare, Medicaid, Healthy Families, TRICARE or Champ-VA, and the Indian Health Service.

B4A. //Are you/Is PERSON FROM S1// covered by a health insurance plan through a current or former employer or union?
Post-Processing References (held over from 2008/2010)

- //Convert monthly to yearly income in H85. Autocode H86 based on response to H84 and H85//
- //Autocode H87 as appropriate based on response in H86. If H86 = “98” or “99” then H87 = “99”//
- //D30A and D30B are to be calculated in post-processing.//

NOTES

- In the CATI program, respondents who fulfill B18days $\geq 365$ or B18 = 12 months are getting into B21 and B22, although the logic in the questionnaire was designed to exclude this subset of respondents from B21 and B22. The responses to B21 and B22 for this extra set of respondents should remain in the dataset since they add extra valuable information.

- PROGRAMMER – We need a help screen available at all times that provides the following text:

  If you have questions or concerns about the study, or if you feel that you have been harmed as a result of study participation, you may call the State of Ohio at 1-888-643-7787.
**Introduction and Screener Questions for Main Sample**

S5 //ASK IF S4A=01 OR S2A1=01//
Hello, my name is __________________[INTERVIEWER SAY FIRST AND LAST NAME], and I am calling on behalf of the State of Ohio. We are conducting a research survey on health insurance coverage, use of medical services, satisfaction with health care, and access to health care. Your telephone number was chosen randomly and all information will be kept strictly
confidential and reported in group form. This call may be monitored or recorded for quality assurance.

[IF NECESSARY, We are also interested in experiences of persons who do not have health insurance.]

[IF NECESSARY, The sponsors need your household’s input to make health care policy decisions that may help you and your family.]

[IF NECESSARY, I work for RTI, a survey research company contracted by the State of Ohio.]

[IF NECESSARY, This survey should take 20 minutes to complete.]

[IF NECESSARY, You may call the State of Ohio at 1-888-643-7787 if you feel you have been harmed as a result of study participation, or if you have any other questions or concerns about the survey.]

01 (DISPO 171) AVAILABLE
02 (DISPO 171) NOT ABLE TO PARTICIPATE AT THIS TIME
98 (DISPO 048) DK
99 (DISPO 049) REFUSED

PRES8 Now, I would like to ask a few general questions about (yourself/person from S1i) and (your/his or her) family.

Before we begin, the State of Ohio would like me to tell you a few things about the study. This interview will last approximately 20 minutes. You will receive no direct benefits from participating in this survey, but your responses will help the State of Ohio better understand health and health care in Ohio. Potential risks are minimal, although some people may feel uncomfortable when talking about themselves or others. This study is completely voluntary and you do not have to answer any question you do not want to. You can end the interview at any time. Everything you say will be kept confidential and will have no effect on any benefits you are currently receiving. If you would like to speak to someone about the survey please call the State of Ohio at 1-888-643-7787 or if you have questions about your rights as a study participant, you can call RTI at 1-855-500-1438.

SPR1 //If S4 = 01, ask SPRX1.//

98  DK
99  REFUSED

[INTERVIEWER HELP SCREEN: Owned or Being Bought: Living quarters are “Owned or being bought” if the owner or co-owner is a household member of the unit even if (s)he still has a mortgage or has not fully paid for the unit. A condominium or a cooperative unit is “Owned or being bought” only if the owner lives in it.

Rented for Cash: Living quarters are “Rented for cash” if the occupants pay or have a contract for any money rent (even by persons not living in the unit).

Occupied Without Payment of Cash Rent: Living quarters are “Occupied without payment of cash rent” if the unit is not “Owned or being bought” and if the money rent is paid or contracted. Persons usually live in these units in exchange for services, or as a gift from a relative or friend not living in the unit. If occupants pay only for their utilities but do not pay any money rent, report the unit as “Occupied without payment of cash rent”.]

i92  //ASK IF i91d=01//
Hello, my name is _______________[INTERVIEWER SAY FIRST AND LAST NAME],
and I am calling on behalf of the State of Ohio. We are conducting a research survey on health
insurance coverage, use of medical services, satisfaction with health care, and access to health
care. Your telephone number was chosen randomly and all information will be kept strictly
confidential and reported in group form. This call may be monitored or recorded for quality
assurance.

(IF Pi90 = 98 OR 99: We are asking about the child with the most recent birthday in //PERSON
FROM S1’s// family.)

(IF Pi90 ≠ 98 OR 99) We have identified //PERSON FROM i90// as the eligible child in your
family and would like to ask you some questions about //PERSON FROM i90’s// health
insurance coverage and care.

[IF NECESSARY: We are also interested in experiences of children who do not have health
insurance.]

[IF NECESSARY: I work for RTI, International, a not-for-profit survey research company
contracted by the State of Ohio.]

[IF NECESSARY: The sponsors need your household’s input to make health care policy
decisions that may help people like you and your family.]

[IF NECESSARY: You may call the State of Ohio at 1-888-643-7787 if you feel you have been
harmed as a result of study participation, or if you have any other questions or concerns about the
survey. You can also contact RTI toll-free at 1-855-500-1438.]

01  CONTINUE

99  (SKIP TO CHREFUSAL)  REFUSED

Before we begin, the State of Ohio would like me to tell you a few things about the study. This
interview will last approximately 6 minutes and we will be asking questions about //PERSON
FROM i90//. You will receive no direct benefits from participating in this survey, but your
responses will help the State of Ohio better understand health and health care in Ohio. Potential
risks are minimal, although some people may feel uncomfortable when talking about themselves
or others. This study is completely voluntary and you do not have to answer any question you do
not want to. You can end the interview at any time. Everything you say will be kept confidential
and will have no effect on any benefits you are currently receiving. If you would like to speak to
someone about the survey please call the State of Ohio at 1-888-643-7787 or, you can call RTI
at 1-855-500-1438.

RESUME ADULT QUESTIONNAIRE

Q158  //ASK ALL//
//PLEASE REFER TO ADULT QUESTIONNAIRE FOR DETAIL OF CLOSING QUESTIONS//
Appendix B: Monitoring Feedback

Date: 4/14/2012
Monitor: Bo Lu

I have been monitoring the interview for about 1 hour 40 mins this afternoon. Sabrina coordianted the process. I listened to four interviews. One interviewer is really good. The other three seem less familiar with the system or the survey to some degree. Probably this is expected at this early stage. I had three female respondents and one male. At least two of them are quite old, 81 and 72. I am a bit concerned with the age and gender distribution given this is a weekend call. Also, it seems there are some bugs with the system about valid value, ranges, skip patterns, etc. Here are specific comments:

1. Akeisha Rhodes (this is a short one, about 1/3)
   - Her pace is a bit too fast;
   - For one question (Are you living quarter, ...), the respondent provides the answer before she finished the question. She just stopped and recorded the answer without finishing the question.

2. Pamela Williams (start from about half way)
   - misread questions several times, but correct them immediately;
   - for one or two occasions, the highlighted part is not emphasized enough;
   - ask the respondent to hold on during the interview to fix something, it took about 20-30 sec;

   Overall, she did a very good job. She checked with the respondents during the interview by asking "are you OK so far with the survey?". After the interview, the respondent said she did a great job.

3. Tanica West (about 3/4 of the survey, this is the only one with the child part)
   - misread questions several times, but correct them immediately;
   - should pay a bit more attention on emphasizing the highlighted script;
   - Stopped twice, the first time, she accidentally exit the survey and the respondent had to hold on for more than a minute; the second time, she had to fix something and the respondent had to hold on for 30 sec;
   - The job type question seems a bit problematic: the respondent said "information", she chose "transportation, information, communication, etc" option. Then the next question asks to pick a specific one, but the respondent chose "other", then said "information service". She could clarify with the respondent to choose "information" option.
   - The respondent has only a 9 month baby and said she had insurance since she was born. But the system still prompts the question regarding uninsured kid. I am not sure if this is a bug of the skip pattern or mis-operation of the interviewer.
   - There is some issue with the breastfeeding question, it seems that she cannot enter a valid number.
- For dental heath question, the respondent said that his daughter has not teeth yet. Not sure how to code.
- For time on watching TV question, the respondent said no, but it seems 0 is not a valid option.
- For eating meal question, it says "the past 7 days", but system has a range from 0-30. It should be 0-21.

4. Carrie Pooner (this is a complete one, no child, it took about 24 min)
- misread questions several times, but correct them immediately;
- should pay a bit more attention on emphasizing the highlighted script;
- asked the respondent to hold on twice, the first time is short, and the second time, she also accidentaly exit the survey, so the respondent had to hold on longer to wait her to get back;
- for weight question, the respondent said "115", she did not clarify, just said "115 pounds". Probably she should make more effort to confirm it is pound;
- for one question, the respondent answered "one and half year", but she had some problem coding it, so she asked the respondent to choose between "1 year", "2 year" or "18 months". The respondent picked "18 months".
- The respondent asked why the "Are you living quarter" question related to health issues. She did not answer. But it doesn't matter since this is the very last question.

Monitor: Dave Dorsky

I monitored from about 2:10 to 3:15 today. The facilitators were Paloma Carroll and Guernardo(sp?) Simmons and the interviewer was Carmen Kunkowski. There were 2 interviewers scheduled but one called in sick. I was surprised to hear two completes since in past monitoring sessions with the previous vendor there were rarely 2 completes in an hour even with several interviewers.

I thought the interviewer generally did pretty well considering how new the survey was to her. Her main problem was that she tried to go too fast at times and stumbled over words. She did much better when she slowed down. Both of the interviewers were with elderly males. At B18 she missed an opportunity to read the 2nd "if necessary" prompt defining "primary plan" after the respondent showed some confusion. Elsewhere she did a good job repeating the question when there was confusion, and her demeanor was pleasant and professional. She also did a good job emphasizing the appropriate words.

My main concerns are with the survey content and CATI:

1. The intro at PRES8 seems very long and although I heard nobody hang up on it today I think the risk is high. Is there any way at all to shorten it?

2. One of the contacts was a cell interview where the respondent was incorrectly given the random adult respondent selection script at S1. Guenardo said this is known issue that hasn't been fixed yet. He also said no cell interviews were supposed to be scheduled for the pilot. Is that true? With cell phones being such a large percentage of the sample does it make sense to not to
include any cell interviews in the pilot? We're lucky we caught this major error before fielding. What other potential errors in the cell version will we miss if it's not piloted?

3. There was a typo in cell1. Guernardo said this was also a known issue not fixed yet.

4a. The meals questions were problematic in both interviewers. In the first interview when asked how many meals the family ate together the respondent replied "all of them". When the interviewer asked for a number the respondent struggled. The interviewer then suggested 21. Then when asked how many of these meals were cooked at home the respondent struggled again, first giving a percentage and then eventually with some struggle and delay coming up with a number that didn't match the percentage.

4b. The second interview was with a person living alone who didn't understand why he was being asked about sitting down to meals with his family.

Given these problems I think we need to consider modifying the meal questions. Is there a version that instead of asking "how many meals" asks whether the family ate all, most, some, or no meals together? That would be much less respondent burden and take less time. If that's not feasible, can we add in an option for "All" instead of making the respondent calculate (7 X 3 = 21 may be easy for us but it's not for everybody, and it's even more confusing if they eat 3 meals during the week but only 2 on weekends, etc.).

I also think we should skip these question at least for respondents with no other family members living in their home. If the information is only needed for families with children then we should only ask these questions of adults with children in their family.

Date: 04/16/2012
Monitor: Tim Sahr

Case # 1:
Interviewer tone was good, interviewer is consistent. Background noise is noticeable.

Very chatty respondent who is stressing the flow of the interviewer. The interviewer is doing well. The respondent bogged-down during the medical access questions. (TJN) The interviewer also did a good job of keeping the respondent on track. The respondent was regularly providing situations rather than answers and there were stretches where all answers needed to be probed.

Good pickup on ER visits, lady was confused and the interviewer navigated well.

Medical home questions are confusing the respondent. The interviewer is excellent at keeping at it -- but the confusion is hurting the timing of the questionnaire. The respondent is a senior getting home nursing assistance and is not considering the nursing service to be a medical home -- she is considering her physician.

The interviewer is shifting the pace related to comprehension. As the respondent gets bogged-down conceptually, the interviewer slows-down, as it eases the interviewer picks up the pace.
Respondent skipped the meals questions due to discomfort related to being alone -- no one to share meals with.

Discussed with T.J. (RTI) that the transitions between topics seems too choppy. The respondent is being tested on transitions.

Case # 2:
Interviewer had excellent diction! Good positive attitude toward the respondent.

Need to check skip pattern relating to saying "no" to a personal physician or nurse and then being asked about "did you need to call this provider...."

Interviewer is having some difficulty in reading flow in the middle part of the interview.

Eating habit questions are taking a while to answer. Also was this way for Case # 1. Do not understand the hesitation on the eating questions. (TJN) This has been similarly true in other interviews monitored.

Industry question is tough, confusing. Tough to pick an industry. (TJN) This is particularly true with an elderly respondent who had shown some difficulty with concepts.

Some of the words in the CATI are combined and are throwing-off the reading (e.g., "infamily", "otherstate").

Was some confusion between Medicare and Medicaid for the child. Interviewer handled the distinction well. However, the respondent was confused about the insurance status of her daughter. Her daughter was uninsured but she originally stated that she was insured. A check back function in the CATI should have checked for this and put the interview back for a verification of the insurance status. (TJN) Would seem to be a good place to implement a hard check when first response is inconsistent with previous choices.

There is a bit of unfamiliarity with the instruments -- particularly with the child interview. (TJN) Length could be shortened by reading question only and then probing as necessary with selected answer options. Do not preference a list -- do not truncate the list. (TJN) I did not hear list truncated but could have missed it.

Date: 4/16/2012
Monitor: Barry Jamieson

I had 2 interviews that I monitored. Both respondents were elderly persons.

Interviewer #1 Diane Bumgarder (1/2 interview); Respondent; elderly man; Overall good interview pace; however some words were garbled or had to be re-read;

Respondent struggled with food questions.
Interviewer #2  La Quinta Forman;  Respondent; Elderly 74 female;

Great pronunciation; Perhaps pace of interview was a little too slow;

Respondent had Medicare insurance; really struggled with answering following question on whether she purchased health insurance directly. Respondent cut off interview shortly after that.
